## Mobile Separation Unit

Solution for Farm Contractor  
or shared operation  
in the manure management

- Mobile Separation Unit is a plug-and-play equipment that can be easily transported, positioned and operated in a short time.
- It is composed by CRI-MAN standard machines and it is a flexible system: it is possible to assemble the unit with different sizes of separators and pumps .
- The long and swinging conveyor allows to load the solid fraction in a wide working area.
- Available with overflow or with pressure sensor and VFD on request.
- Applicable to Livestock, Biogas and Food Industry.

**Main Strengths:**

- 2 Chopper pumps (for separator feeding and liquid fraction delivery)
- Electric self priming device
- Swinging conveyor (for long and high working distance)
- Flexible unit (possibility to assemble different sizes of separators and pumps )
